

Medical engineering

Reliable processes
with high-performance
lubricants

Oest high-performance fluids ensure reliable processes

Manufacturing technical components for medical applications involves processing extremely challenging materials. Process reliability is therefore the top priority.

Oest high-performance lubricants are made to meet a priority: The very best cutting performance guarantees long and predictable tool life and prevents premature tool failure and rejection. High-quality components can be used to produce "biocompatible" workpieces. Intensive development ensures stable and state-of-the-art formulations that are future proof.

CUTTING FLUIDS

Oest MEBA / Oest COLOMETA

PROCESS CHAIN

Raw material

Metal cutting

Ideal for tough processing of stainless steels and titanium alloys.

Advantages

- The very best metal cutting performance
- Clean machines
- Minimised consumption
- Can be removed without leaving residues
- Proved biocompatibility

= Reliable and economical processes

CLEANING MEDIA

Oest SOLV W / Oest SOLV IP

Cleaning

PACKING &
STERILISING

System supplier for metal working fluids

In close dialogue with our partners, we develop and produce lubricants with excellent performance, precision and cost-effectiveness.

COLOMETA

Colometa S

Fully synthetic grinding solutions

Colometa PA

High-performance emulsions

Colometa BF

Boron-free coolants

MEBA

MEBA

Cutting oils for general machining

MEBA G

Grinding oils

MEBA SP

Spray mist lubricants for MQL

SYSTEM SUPPLIER

Machine lubricants, cleaners and corrosion protection

Monitoring and service

Total fluid management
